

Main Dashboard UX Audit Report

Table of Contents:

- 1. Executive Summary
- 2. Key Dashboard Findings
- 3. Current Workflow (Observed)
- 4. Recommended Workflow (UX Optimized)
- 5. [Dashboard Usability Scorecard](#)
- 6. Competitor Benchmark Overview
- 7. Summary

Executive Summary:

This document evaluates the usability and workflow maturity of the dashboard. The goal is to assess insight-to-action flow, navigation clarity, KPI interactivity, and enterprise readiness. The dashboard is functionally structured but lacks drill-down capability and workflow continuity.

Key Dashboard Findings:

- KPI cards (Total Clients, Active Clients, Calls Processed, SMS Sent) show hover effects but are not clickable (false affordance).

- For page architecture – need to balance cognitive load discoverability
- No drill-down view for Calls Processed and SMS Sent.
- Search filters only client; not clearly connected to KPI metrics.
- Pagination/Logout - visible only after scroll (discoverability issue).

- Dashboard provides summary metrics but does not support deeper investigation.

Current Workflow (Observed):

STEP 1: Login → User lands on dashboard with KPI summary.

STEP 2: View KPI Cards → Metrics visible but not interactive.

STEP 3: Scroll → Search bar and client cards displayed.

STEP 4: Scroll Further → Pagination becomes visible.

Issue: Insight-to-action flow is incomplete. Metrics do not lead to actionable views.

Recommended Improved Workflow (UX Optimized):

STEP 1: Login → **Dashboard Overview with interactive KPI cards.**

STEP 2: Click KPI (e.g., Calls Processed) → **Navigate to filtered Call Logs.**

STEP 3: Drill-down into detailed analytics view (filters, date range, export).

STEP 4: Take action (adjust campaign, export report, modify AI flow).

STEP 5: Return to dashboard with contextual breadcrumb navigation.

Dashboard Usability Scorecard:

Area	Score	Observation
Visual Hierarchy	3.5/5	Clear KPI placement but weak data grouping alignment

Discoverability	3/5	Search visible, pagination hidden on scroll
Interaction Consistency	2.5/5	Hover effects without click ability create false affordance
Data Actionability	2/5	No drill-down for Calls Processed & SMS Sent
Navigation Efficiency	3/5	Functional but requires extra scrolling/navigation
Overall Dashboard UX Score: Estimated Score: 2.8 – 3.2 / 5		

Competitor Benchmark Overview:

Compared against platforms such as Exotel, Twilio, and Dialogflow.

- Competitors provide clickable KPI drill-down navigation.
- Advanced analytics dashboards with export and filtering.
- Visual workflow builders with preview/simulation.
- Clear enterprise-grade reporting and audit logs.

Summary:

The dashboard currently answers 'How many?' but does not support 'Which?' or 'Why?'. Enabling KPI drill-down would strengthen insight-to-action flow and improve product maturity perception.
