

Final Report

Table of Contents:

- 1. [UX Quality Scorecard](#)
 - 2. [Parameters to Test Usability](#)
 - 3. [Three Pillars for Business Success](#)
 - 4. [UX Roadmap](#)
-

1. UX Quality Scorecard

Audit Area	UX Score	Strategic Status
Admin Profile Page	3.2 – 3.6 / 5	Good structure; lacks governance and security depth.
Call Logs & Analytics	3.2 – 3.6 / 5	Strong data; lacks interaction and drill-down logic.
Main Dashboard	2.8 – 3.2 / 5	Functional; hindered by false affordances and high scroll.

2. Parameters to Test Usability:

- 1. Task Completion Efficiency - How quickly users complete core workflows.
- 2. Insight-to-Action Flow - Whether metrics directly enable decisions.
- 3. Interaction Consistency - Uniform behavior across similar UI elements.
- 4. Data Layer Coherence - Filters and metrics synchronized system-wide.
- 5. Cognitive Load - Number of steps and mental effort required.
- 6. Navigation Depth - Click distance to reach meaningful data.
- 7. Validation & Error Handling - Guardrails for incorrect inputs.
- 8. Security & Governance Controls - Admin-level safeguards.
- 9. Scalability Readiness - Ability to handle growth (multi-franchise, export, bulk actions).
- 10. Enterprise Perception - Whether UI conveys maturity and reliability.

3. Three Critical Pillars for Business Success

Pillar 1: Identity Integrity & Security (Governance)

- **Observation:** Identity-critical fields like "Username" are editable without guardrails, and security is limited to basic password resets.
- **Business Impact:** This creates significant data integrity risks and reduces admin confidence in the platform's security maturity.

Pillar 2: Insight-to-Action Continuity (Efficiency)

- **Observation:** KPI cards and graphs appear interactive (hover effects) but are non-clickable, creating "False Affordances".
- **Business Impact:** Users are forced to manually navigate and re-filter data, increasing cognitive load and "Time-on-Task".

Pillar 3: Data Quality & Scalability (Operations)

- **Observation:** Critical fields (Phone, Tax/Legal) lack input validation and formatting masks.
 - **Business Impact:** Invalid data entry compromises reporting accuracy and limits the platform's ability to scale for enterprise-level clients.
-

4. The Strategic UX Roadmap

Phase 1: Foundation & Governance (Immediate Impact)

- **Input Hardening:** Implement masking for Phone, GST, and PAN fields to ensure clean data entry.
- **Identity Guardrails:** Lock critical fields (Username) and implement a controlled change-request process.
- **Security Maturity:** Introduce 2FA, active session management, and "Last Login" timestamps.

Phase 2: Interaction & Flow (Short-Term Optimization)

- **KPI Drill-Downs:** Enable "Click-to-Filter" on KPI cards to navigate directly from a summary to specific call logs.
- **Synchronized Filtering:** Ensure filters applied to the data table automatically update the corresponding visual graphs.
- **Layout Consolidation:** Move away from "card-per-field" patterns to reduce vertical scroll and visual fragmentation.

Phase 3: Enterprise Readiness (Long-Term Strategy)

- **Advanced Analytics:** Introduce data export features and detailed investigation views.
- **Workflow Simulation:** Align with industry leaders (e.g., Twilio, Exotel) by integrating visual preview and simulation tools.

- **Audit Transparency:** Implement comprehensive system logs to support enterprise-grade compliance.
-
