

Email Campaign Manager (ECM) + Design Studio

Product-Led / Principal UX Case Study

Project Overview

Role	Director – UI/UX & Product Experience
Product Type	B2B SaaS Marketing Automation Platform
Scope	Experience Architecture + Scalable Rollout
Timeline	Nov 2022 - Aug 2023 (10 Months)

Context

Marketing teams were using disconnected tools for HTML email creation, automation setup, segmentation, and analytics. This created slow campaign launches, engineering dependency, and inconsistent brand execution across regions.

Problem Statement

- Multiple tools required for one campaign lifecycle
- Manual HTML development slowed execution
- No unified workflow from design → schedule → launch
- Limited experimentation and performance visibility
- High dependency on engineering for small changes

Product Vision (Principal UX Thinking)

Build a unified Campaign Engine integrated with a no-code Design Studio to enable marketers to design, validate, schedule, and launch campaigns in a few clicks — without engineering intervention.

Solution Architecture

A. ECM - Campaign Engine

- Drag-and-drop campaign workflow builder
- Audience segmentation + automation triggers
- Centralized scheduling & launch control
- Real-time performance dashboard
- Role-based governance for enterprise teams

B. Design Studio - HTML Automation Layer

- No-code modular email template builder
- Production-ready responsive HTML generation
- Design system-based components

- Accessibility & responsiveness auto-validation
- One-click push to ECM for activation

Unified Workflow (Few-Click Execution)

1. 1. Select Template / Create via Design Studio
2. 2. Customize Content Blocks
3. 3. Auto-Generate HTML
4. 4. Define Audience & Automation Rules
5. 5. Preview & Validate
6. 6. Schedule & Launch

Measured Impact

- 60% reduction in campaign setup time
- 70% increase in internal product adoption (Q1)
- 50% reduction in engineering dependency
- 22% improvement in lead-to-MQL conversion
- 3x faster experimentation cycles

Principal UX Leadership Contribution

- Defined end-to-end product experience strategy
- Led UX research, journey mapping, usability validation
- Established scalable design system framework
- Ensured Figma-to-code consistency
- Partnered with product, engineering & marketing leadership
- Balanced business goals with user-centric outcomes
